- Equipped with safety pull pin to prevent accidental manual discharge of Sinorix™ cylinder
- Self venting
- Solid brass construction
- Stainless-steel-operation lock pin
-  UL Listed &  ULC Listed  
CSFM, FM & NYMEA Approved

### Description

The Local Manual Control Head is equipped with an operating lever for manual actuation of Siemens Building Technologies, Inc. – Fire Safety Sinorix™ cylinders. The Local Manual Control Head is installed once it is screwed into the top of cylinder valve. The Local Manual Control Head is secured in a closed position by a safety pull pin. When the safety pull-pin is removed, the lever can be manually pushed down to the open position. After the lever is pressed down, the valve on which it is installed shall activate. The lever shall remain locked until manually reset. The lever-operated control head is self-venting.

### Local Manual Control Head

To install, first make sure the Local Manual Control Head is in the “SET” position – handle up – with the safety pull pin and seal wire intact. Next, remove the protection cap from the top-plug adapter assembly. Last, use an Allen wrench to assemble the Local Manual Control Head to the cylinder valve.
